DALET

STREAMLINE YOUR MEDIA OPERATIONS

Powered by Dalet Galaxy five, designed for your workflow.

Media teams need to continuously improve and efficiently manage all the phases of the content lifecycle, including acquisition, production, enrichment, editing, and curation, as well as packaging and distribution - all within constraints of time and budget. Technical operations need to service these media teams with platforms that efficiently merge various media and metadata layers, expertly manage access rights and privileges, and provide seamless third-party integrations thanks to an open IT architecture.

Dalet provides the platform to give your media teams all the power they need at their fingertips, and the professional services to return the best value from the investment and assist with your technical and organisational transformation.

KEY HIGHLIGHTS

CENTRAL INGEST, SCHEDULING & RECORDING

With the advanced ingest & playout capabilities of Dalet, media organizations can manage simultaneous and synchronized ingest of multiple camera feeds. Dalet Galaxy also provides a powerful scheduling tool for automated ingest.

POWERFUL LOGGING & TRANSCRIPTION

Operators log content from all camera angles using Dalet Events Logger, which is fully customizable. Content can be transcribed by operators using stenography methods or speech-to-text services to generate live captions. Dalet WebSpace users can later use the logs to search content and tags, select shots and create EDLs using Dalet OneCut for content production.

AUTOMATED DISTRIBUTION & PLAYOUT

All media assets, including archived material, are immediately available, allowing you to create the content once then use and distribute it across many platforms. Flexible metadata schemes facilitate the assembly of tailored packages, while the powerful Dalet Workflow Engine automates transcoding & delivery. Dalet OnAir automates playout with graphics generated by Dalet Cube.

UNIVERSAL METADATA CAPABILITIES & AI

Benefit from a future-proof platform with open and advanced data models, the foundational framework for the implementation of new technologies such as cognitive services. Search your content catalog and archives quickly and efficiently with Dalet's customized and contextual metadata forms and powerful index tools.

Key highlights include the support of automatically generated, human-authored, and geo-location metadata; integration with AI and auto-analysis services (speech to text, facial recognition, etc.); and complex digital rights management.

NEWS & RADIO PRODUCTION + DISTRIBUTION CAPABILITIES

A powerful, end-to-end production, automation and distribution solution. Empower your editors and producers with intuitive tools for creating compelling multimedia stories and newscasts right on their desktops and mobile devices while on the go.

BUSINESS INTELLIGENCE & ACTIONABLE DATA

A well-structured MAM back-end tightly combined with workflow orchestration is the only way to enable data-driven media operations. Consolidating and aggregating this data into actionable insights is key to develop BI capabilities and improve over time.

CLOUD-READY, FUTURE-PROOF FRAMEWORK

Exploit new business and technological possibilities brought about through the advancement of cloud, virtualization, dynamic scalability and hybrid on-/off-premise deployments. Dalet solutions are based on agile frameworks that are designed from the ground up to leverage public, private or hybrid cloud infrastructure.

WORLD CLASS SECURITY

Dalet has achieved ISO/SEC 27001:2013 information security management certification, validating the company's commitment to incorporating the highest level of security practices across Dalet internal development processes, its product line and its practices.

KEY BENEFITS

POWERFUL WORKFLOW ORCHESTRATION
Streamlines user tasks and back-office media processes; bring full visibility to your operations

FEDERATED DATA MODEL
Leverage object metadata and their relationships to drive workflow orchestration

AGILE SOLUTION
Designed for continuous adaptation

MATURE PLATFORM
Ensures on-time delivery

ADVANCED COLLABORATION
Across teams and locations all the way to the field

CONTENT MANAGEMENT
Connects your content to opportunities

ABOUT DALET

Dalet solutions and services enable media organizations to create, manage and distribute content faster and more efficiently, fully maximizing the value of assets. Based on an agile foundation, Dalet solutions offer rich collaborative tools to power end-to-end workflows for news, sports, program preparation, post-production, archives, radio, education, governments and institutions. Dalet platforms are scalable and modular. They offer targeted applications with key capabilities to address critical functions of small to large media operations - such as planning & workflow orchestration, ingest & cataloguing, editing, chat & notifications, transcoding, play out automation, multi-platform distribution and analytics.
